## DETAILED ACTION

### *Election/Restrictions*

1. Claim 3-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/24/05.

### *Specification*

2. The abstract of the disclosure is objected to because the abstract is too long. Applicant is asked to delete the description of the method which is now withdrawn. Correction is required. See MPEP § 608.01(b).

### *Claim Rejections - 35 USC § 102/103*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1773

5. Claim 1 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Christodoulides et al. (J Appl. Phys., 87, pp. 6938-40).

Christodoulides et al. disclose a high density recording medium useful for magnetic recording (which requires an "information recording unit" as claimed) formed from a FePt/C structure deposited on a substrate. The reference does not disclose the claimed step of forming this layer by simultaneous deposition of Fe, Pt, and C. However, this is a process limitation in an article claim. The only structure implied by this limitation is the formation of a film which includes Fe, Pt, and C. Thus, the disclosed structure appears to be substantially the same as claimed.

Even though product-by-process claims are limited and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). When there is a substantially similar product, as in the applied prior art, the burden of proof is shifted to the applicant to establish that their product is patentably distinct not the examiner to show the same process of making. *In re Brown*, 173 USPQ 685 and *In re Fessmann*, 180 USPQ 324.

### ***Claim Rejections - 35 USC § 103***

6. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Christodoulides et al. (J Appl. Phys., 87, pp. 6938-40).

Art Unit: 1773

Christodoulides et al., as applied above, discloses all of the limitations of the claims except for the claimed volume percentage of carbon present in the FePtC layer. The reference teaches that magnetic isolation of the FePt and media noise can be controlled by adjusting the amount of carbon in the system. Thus, it is the Examiner's contention that it would have been obvious to one of ordinary skill in the art at the time of invention to adjust the volume of carbon present in the FePtC layer taught by Christodoulides et al. in order to achieve optimal grain isolation and media noise. Such an optimization would have been obvious because it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).
